

149  **Buffers**

Made Easy  
Chapter 17.1-2

150  **What is a Buffer?**

- An aqueous solution that has a highly stable pH even upon addition of small amounts of  $H^+$  or  $OH^-$ .
- The solution is able to absorb and neutralize incoming acid or incoming base.
- How??
  - ✓ Because of the presence of significant quantities of both a conjugate weak acid/base pair.
- $HA \rightleftharpoons H^+ + A^-$
- $X-NH_2 + H_2O \rightleftharpoons X-NH_3^+ + OH^-$

151  **There are two methods to construct a buffer**

1. Dissolve a conjugate WA-salt (or WB-salt) into a solution of WA or WB.
  - ✓ Example: Dissolving  $NaC_2H_3O_2$  into a solution of  $HC_2H_3O_2$ 
    - Because acetic acid is weak, the acid is present
    - When sodium acetate salt dissolves it completely dissociates (soluble salt) and creates a significant quantity of acetate ions, the conjugate base of acetic acid
    - Therefore both the weak acid, and the conjugate base are present in the solution
2. Titrate a WA (or WB) partway along.
  - ✓ Neutralization of the weak acid generates the conjugate base. The more weak acid you neutralize, the more weak base is present

152  **The pH of an acetic acid solution is ~ 4.7  
If you added some sodium acetate to acetic acid,**

- A. The pH would go up
- B. The pH would go down
- C. The pH would stay the same

154  **The pH of an acetic acid solution is ~ 4.7  
If you added some sodium hydroxide to the acetic acid,**

- A. The pH would go up
- B. The pH would go down
- C. The pH would stay the same

156

- A. pH = 9.26
- B. pH = 7.00
- C. pH = 4.74
- D. pH = 1.80

158

- A. There are no spectator ions.
- B.  $Cl^-$
- C. Both  $NH_4^+$  and  $Cl^-$
- D.  $NH_4^+$

160

- A.  $\text{NH}_3(\text{aq}) + \text{H}_2\text{O}(\text{L}) \rightleftharpoons \text{NH}_4^+(\text{aq}) + \text{OH}^-(\text{aq})$   
B.  $\text{NH}_4^+(\text{aq}) + \text{OH}^-(\text{aq}) \rightleftharpoons \text{NH}_3(\text{aq}) + \text{H}_2\text{O}(\text{L})$   
C.  $\text{H}_3\text{O}^+(\text{aq}) + \text{OH}^-(\text{aq}) \rightleftharpoons 2\text{H}_2\text{O}(\text{l})$   
D.  $\text{NH}_4^+(\text{aq}) + \text{H}_2\text{O}(\text{L}) \rightleftharpoons \text{H}_3\text{O}^+(\text{aq}) + \text{NH}_3(\text{aq})$   
E.  $\text{H}_3\text{O}^+(\text{aq}) + \text{NH}_3(\text{aq}) \rightleftharpoons \text{NH}_4^+(\text{aq}) + \text{H}_2\text{O}(\text{L})$
- 162  **A mixture of 0.10 mol of  $\text{NH}_4\text{Cl}$  and 0.12 mole of  $\text{NH}_3$  is added to enough water to make 1.0 L of solution.**

- 163  **A mixture of 0.10 mol of  $\text{NH}_4\text{Cl}$  and 0.12 mole of  $\text{NH}_3$  is added to enough water to make 1.0 L of solution. Now, add 250 ml of 0.20 M  $\text{HCl}$  and calculate the pH.**

- 165  **Which of the following combinations will result in a buffer?  
Will the pH of the solution be 7, above 7, or below 7?**
- A. 20 ml of 1 M  $\text{KNO}_3$  and 20 ml of  $\text{HNO}_3$

- B. A solution of calcium acetate and acetic acid  
C. 100 ml of 0.5 M  $\text{CH}_3\text{NH}_2$  with 5 g of dissolved  $\text{CH}_3\text{NH}_3\text{NO}_3$   
D. 20 ml of 1 M NaOH and 20 ml of NaCl
- 167  **Which of the following combinations will result in a buffer? Will the pH of the solution be 7, above 7, or below 7?**  
A. 50 ml of 0.5 M NaOH with 25 ml of 0.5 M HF  
B. 20 ml of 1 M  $\text{HNO}_3$  and 10 ml of 1 M NaOH  
C. 100 ml of 0.5 M  $\text{CH}_3\text{NH}_2$  with 100 ml of 0.5 M  $\text{HNO}_3$   
D. 100 ml of 0.5 M  $\text{CH}_3\text{NH}_2$  with 60 ml of 0.5 M  $\text{HNO}_3$
- 169  **Consider the weak acid ionization reaction represented below. Which of the actions below would shift the equilibrium position toward reactants?**  
 $\text{HNO}_2 \rightleftharpoons \text{H}^+ + \text{NO}_2^-$   
A. adding HCl  
B. adding KOH  
C. adding  $\text{H}_2\text{O}$   
D. adding  $\text{NaNO}_2$
- 171  **Calculate the pH of a 0.025 M  $\text{HNO}_2$  solution.  $K_a = 4.5 \times 10^{-4}$**
- 173  **Calculate the pH of a solution made by combining 0.30 mole of sodium nitrite with 0.50 mole of  $\text{HNO}_2$  in a 2.0 L solution.  $K_a = 4.5 \times 10^{-4}$**
- 175  **Which of the following combinations can produce a buffer solution? Select all that apply.**  
A. HCl / NaCl  
B.  $\text{HC}_2\text{H}_3\text{O}_2$  /  $\text{NH}_3$   
C.  $\text{H}_3\text{PO}_4$  /  $\text{NaH}_2\text{PO}_4$

- D.  $\text{HNO}_3 / \text{Ca}(\text{OH})_2$   
E.  $\text{HCN} / \text{NaOH}$   
F.  $\text{NH}_4\text{NO}_3 / \text{NH}_3$
- 177  Which of the following combinations can produce a buffer solution? Select all that apply.
- A.  $\text{KNO}_3 / \text{NaOH}$   
B.  $\text{HCN} / \text{NaOH}$   
C.  $\text{NH}_3 / \text{HCl}$   
D.  $\text{HCl} / \text{KOH}$   
E.  $\text{NH}_3\text{NO}_3 / \text{NH}_3$
- 179  What is  $[\text{H}^+]$  of a 0.050 M HF solution dissolved with enough solid NaF to produce a solution 0.20 M NaF  $K_a(\text{HF}) = 6.8 \times 10^{-4}$
- A.  $1.7 \times 10^{-4} \text{ M}$   
B.  $3.4 \times 10^{-4} \text{ M}$   
C.  $6.8 \times 10^{-4} \text{ M}$   
D.  $1.4 \times 10^{-3} \text{ M}$   
E.  $2.7 \times 10^{-3} \text{ M}$   
F. Cannot be determined without knowing volumes of each, or total volume
- 181  Calculate the pH of a 0.50 M solution of sodium acetate ( $\text{NaC}_2\text{H}_3\text{O}_2$  or NaAc) in 0.50 M acetic acid ( $\text{HC}_2\text{H}_3\text{O}_2$  or HAc).  $\text{p}K_a(\text{HAc}) = 4.74$
- A. 3.74  
B. 4.24  
C. 4.74  
D. 5.24  
E. 5.74
- 183  Using equal volumes and concentrations of which of the following combinations would be best to make a buffer with a pH above 7 ?
- A. NaCl and HCl  
B.  $\text{NH}_3$  and  $\text{NH}_4\text{Cl}$   
C. NaOH and HCl  
D.  $\text{HNO}_2$  and  $\text{NaNO}_2$   
E.  $\text{NH}_3$  and  $\text{C}_5\text{H}_5\text{NHCl}$
- 185  Calculate the pH of a 0.50 M solution of sodium acetate ( $\text{NaC}_2\text{H}_3\text{O}_2$  or NaAc) in 0.050 M acetic acid ( $\text{HC}_2\text{H}_3\text{O}_2$  or HAc).  $\text{p}K_a(\text{HAc}) = 4.74$
- A. 3.74  
B. 4.24  
C. 4.74  
D. 5.24  
E. 5.74
- 187  In an  $\text{NH}_4^+/\text{NH}_3$  buffer, what concentration changes will occur if a small amount of  $\text{OH}^-$  is added?

- 189  Calculate the pH of a buffer solution containing 0.20 moles sodium acetate and 0.30 moles acetic acid (HAc)  $pK_a$  (HAc) = 4.74.
- A. 2.63
  - B. 4.57
  - C. 4.74
  - D. 4.92
  - E. 5.27
  - F. not enough information, volume information must be known to calculate a pH.
- 191
- A. All acid-base pairs will function as buffers.
  - B.  $\text{HCHO}_2$  and  $\text{CHO}_2^-$  will not work as a buffer because  $\text{CHO}_2^-$  is a spectator ion.
  - C.  $\text{HCO}_3^-$  and  $\text{CO}_3^{2-}$  will not work as a buffer because  $\text{HCO}_3^-$  is a spectator ion.
  - D.  $\text{HNO}_3$  and  $\text{NO}_3^-$  will not work as a buffer because  $\text{NO}_3^-$  is a spectator ion.
- 193  Calculate the pH of a buffer solution containing 0.25 moles sodium acetate and 0.30 moles acetic acid (HAc) to which 0.20 moles HCl are added.  $pK_a$  (HAc) = 4.74.
- 195  Calculate the pH of 2000 ml of a buffer solution containing 0.25 moles sodium acetate and 0.30 moles acetic acid (HAc) to which 0.35 moles HCl are added.  $pK_a$  (HAc) = 4.74
